# Fresh Deciduous Fruit (Apples, Grapes, \& Pears): World Markets and Trade 

## 2010/11 Forecast: <br> World Apple Trade Declines; Pears \& Grapes Nearly Unchanged

## APPLES, GRAPES, \& PEARS: 2010/11 FORECAST OVERVIEW

Global apple exports are forecast down 7 percent from last year's record level to 4.9 million metric tons (MT) as a result of lower exportable supplies, higher prices, and reduced import demand. Global production is forecast at 59.2 million MT, down by 6 percent from last year's record level, due to adverse weather in most major Northern Hemisphere producing countries.

World pear exports are forecast at 1.6 million MT, down 3 percent from last year's record level, on smaller exportable supplies, lower overall quality, higher prices, and weaker import demand by major Northern Hemisphere buyers. Global production is forecast at 18.6 million MT in 2010/11, down by 8 percent from last year's record level, resulting from poor weather conditions in most major Northern Hemisphere producing countries.

Global grape exports are forecast at a record 2.3 million MT, up 4 percent from the previous year on expanded supplies and strong import demand. Global fresh-market production is forecast up 2 percent at a record 15.8 million MT. Good growing conditions and expanded acreage in China, which accounts for almost 40 percent of production, is expected to boost world production and offset declines in Turkey and the European Union (EU).

## APPLES

China Accounts for Majority of Growth in World Apple Production in Just Three Years

China, EU, \& U.S. Dominate World Apple Exports

Highlights

- China continues to dominate as the world's largest producer and exporter, accounting for half of global production and 25 percent of exports. Its share of global production has grown over the last five years, due mainly to increased plantings coming into line and government programs aimed at expanding production in western provinces. As a result, production reached record levels last year. However, production is forecast down 5 percent to 30 million MT due to poor weather. Smaller supplies, rising labor and production costs, food inflation, and rising domestic demand are expected to push up domestic prices and weaken exports, which are forecast down 10 percent to 1.1 million MT. Price escalation may dampen exports to price sensitive markets, such as Russia and neighboring Asian countries.
- The EU is the second largest producer, accounting for 20 percent, and is expected to produce 10 percent less at 11.1 million MT due to unfavorable weather in major producing countries. Exports are forecast down 12 percent to 1.1 million MT as a result of smaller exportable supplies. Imports, which are primarily supplied in the off-season by Southern Hemisphere producers, are forecast up 25 percent to $740,000 \mathrm{MT}$ on strong domestic demand for off-season Majority of Fresh Deciduous Fruit Trade Occurs During
Northern Hemisphere Countries' Off-Seasons Northern Hemisphere Countries' Off-Seasons fruit.
- The United States is the third largest producer and exporter. Production is forecast at 4.2 million MT, 4 percent less than the previous year, due to adverse weather conditions in eastern and central states. Exports are forecast down 2 percent to $750,000 \mathrm{MT}$ on reduced exportable supplies and higher prices. Export prospects to Mexico, our largest market, had improved as a result of lower
domestic production and the elimination of the 47 percent antidumping duty in spring 2010. However, in August, Mexico imposed a 20 percent retaliatory tariff over a trucking dispute, which could constrain future sales.
- Chile is the largest Southern Hemisphere exporter, accounting for 15 percent of world exports and 2 percent of production. Production is primarily export-oriented, with the majority shipped to Northern Hemisphere markets. Despite shipping delays caused by adverse
U.S. Apple Exports Forecast Down on Reduced Exportable Supplies
 weather and the earthquake, production and exports in calendar year 2010 expanded due to strong demand by the United States and the EU. However, reported frosts are expected to limit production and exports in the upcoming season.

## PEARS

## Highlights

- China is the world's largest producer and exporter, with a 70 percent share of production and almost 30 percent share of exports. Production is forecast 10 percent lower than last year's record level to 13 million MT due to adverse weather conditions. Exports are also forecast to drop 10 percent to 430,000 MT on reduced exportable supplies, lower quality, higher prices, and less demand from major buyers in Southeast Asia and

China Dominates Global Fresh Pear Production
 Russia.

- The EU, with 13 percent of global production, is expected to produce 2.3 million MT, down 15 percent, due to unfavorable weather in major producing countries. Exports are forecast down almost 20 percent to 258,000 MT due primarily to smaller supplies and lower expected demand by Russia, which accounts for almost 70 percent of its exports. In October, China opened its market to selected Belgian exporters but others are expected to be approved. The EU is also a major importer. With reduced domestic supplies and strong demand, imports are forecast up 30 percent to $363,000 \mathrm{MT}$.
- Argentina is the third largest producer, with production forecast to surge 20 percent to 790,000 MT due to higher yields, while exports are forecast up 15 percent to $460,000 \mathrm{MT}$ on strong expected demand by major markets, including the EU and Brazil. If realized, it will surpass China as the largest exporter.
- The United States is the $4^{\text {th }}$ largest producer and fifth largest exporter. Production is forecast at almost $776,000 \mathrm{MT}, 10$ percent lower than last year's record. As a result, exports are forecast down almost 10 percent to $150,000 \mathrm{MT}$. Mexico's 20 percent tariff related to the trucking dispute will continue to dampen U.S. exports.

## GRAPES

## Highlights

China Gains World Grape Production Shares

- China is the largest supplier, accounting for almost 40 percent of global production, and its production and shares have been growing over the past five years. In contrast, it is a relatively small exporter, accounting for only 5 percent, but its share has been growing over the past few years.
- The EU is the third largest producer, accounting for 12 percent

13.9 million MT (2006/07)

15.8 million MT (2010/11) of global production, and the second largest importer, with a 27 percent share. As a result of lower production and growing demand for off-season grapes, EU imports are forecast up 4 percent to $590,000 \mathrm{MT}$.
- Mexican imports are forecast to rebound by more than half to $60,000 \mathrm{MT}$, though still well below previous years, due to strong demand for Chilean and U.S. grapes. In August, Mexico reduced the retaliatory tariff on U.S. grapes from 45 percent to 20 percent.
- U.S. exports are forecast to remain virtually unchanged at 300,000 MT due to slightly lower exportable supplies and higher prices. Weak demand by Canada, our largest market, is expected to offset strong demand by Hong Kong, Indonesia, and other smaller markets.
- Although Chile accounts for less than 10 percent of global production, it is the world's largest exporter, with a 35 percent market share. With strong off-season demand by Northern Hemisphere consumers, production and

Chile \& U.S Account for About Half of Global Grape Exports

exports are forecast to recover to normal levels after last year's shipping delays caused by adverse weather and the earthquake.

# Apples: Production, Supply, and Distribution in Selected Countries (Working Statistics) (Continued) 

## Metric Tons

| Country Mktg Year | Production | Imports | Total Supply | Fresh Dom. <br> Consumption | Exports | Total <br> Distribution |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |

Note: From 1994, the United States and Mexico are on a Aug-July marketing year. All other Northern Hemisphere countries are on a July-June marketing year. Southern hemisphere countries are on a calendar year indicated as the second year of the split year. Imports and exports will not equal due to statistical discrepancies.

Note: From 1994, the United States and Mexico are on a May-April marketing year. All other Northern Hemisphere countries are on a June-May marketing year. Southern Hemisphere countries are on a calendar year indicated as the second year of the split year. Imports and exports will not equal due to statistical discrepancies. Production has been adjusted to reflect grapes for fresh-market consumption only. Any comparison with previous years and reports should take this into account.
